Dear Hiring Manager,

I am writing to express my interest in the Senior AI Engineer position. The role's emphasis on production delivery of generative and agentic systems, held to measured standards rather than impressions, matches how I have chosen to work, and I would welcome the opportunity to contribute to it.

At Toronto Business College I led an 8-person cross-functional team delivering MinuteMinders, a system automating meeting transcription, speaker diarization, summarization and task extraction. I defined the evaluation approach myself, measuring transcription accuracy at WER 0.0746 and CER 0.2932 and benchmarking summary readability against a Microsoft Copilot baseline, because a system of this kind cannot be accepted on subjective review. Delivery was supported by a Jenkins CI pipeline with SonarQube quality gates across a codebase of roughly 15,400 lines, with Prometheus monitoring on the deployed service.

My current work concentrates on the parts of retrieval-augmented systems that determine whether they can be trusted. For AURA I engineered a validated corpus of 50-70k turns, harmonizing four heterogeneous public datasets into a single schema, and designed tiered quality gates around a 300-example manually validated gold set with Cohen's kappa inter-annotator agreement. The accompanying evaluation harness documents failure modes and known limitations in a model card rather than reporting headline scores alone, which I take to be the practical form of the responsible-AI principles the role describes.

I would note candidly that my production experience is measured in projects rather than years at senior scale, and that my cloud and orchestration exposure is stronger on Azure than on Kubernetes. What I would bring in the interim is rigour about measurement: on a recent local inference benchmark I traced and corrected a timer corrupted by reasoning-phase token emission and a silent validation fallback that had been masking a 53x discrepancy. I would rather find that class of defect than ship a number I cannot defend.

Thank you for your consideration. I would welcome the opportunity to discuss the role further.

Kind Regards,

Atri Joshi
AI Engineer
