

AI engineer with production experience across the full lifecycle of LLM systems: corpus construction and data quality, retrieval-augmented generation, and evaluation harnesses with documented failure modes rather than headline scores. Led an 8-person team delivering a deployed speech-to-summary system with CI and monitoring in place. Comfortable owning measurement integrity and responsible-AI documentation alongside hands-on Python delivery.

SKILLS

AI & Machine Learning	RAG and retrieval systems, LangGraph, prompt engineering, LLM evaluation (eval harness design, failure analysis, Cohen’s kappa, model cards), Whisper, Pyannote, spaCy, local LLM inference (LM Studio, quantized models on Apple Silicon)
Environment & Tooling	FastAPI, Flask, Git, Jenkins, SonarQube, Prometheus, pytest, ruff, mypy, Linux
Languages	Python, SQL, R (coursework only)
Data Quality & Governance	validation and reconciliation logic, tiered quality gates (bronze/silver/gold), root-cause investigation, data dictionary and transformation documentation
Data Processing	PySpark, Pandas, Databricks, Azure Data Factory, Snowflake
Databases & Cloud	MySQL, Elasticsearch, relational data modelling
Reporting & Visualization	Power BI (DAX calculated measures, dashboard design), tiered audience reporting

PROFESSIONAL EXPERIENCE

AI Research Intern Toronto Business College	Jan 2025 — Apr 2025 Toronto, ON
• Led an 8-person cross-functional team delivering MinuteMinders, a system automating meeting transcription, speaker diarization, summarization, and task extraction to replace manual minute-taking (Whisper, Pyannote, Mistral, spaCy, FastAPI, MySQL, Elasticsearch, React). • Defined and ran model evaluation for the system, measuring transcription accuracy (WER 0.0746, CER 0.2932) and benchmarking generated summary readability against a Microsoft Copilot baseline (Flesch Reading Ease 50.53 vs 63.55) instead of relying on subjective quality review. • Built a Jenkins CI pipeline with GitHub webhook triggers and SonarQube quality gates across a ~15,400-line codebase, with Prometheus monitoring on the deployed service. • Ran a documented tool-selection process at each pipeline stage, recording rationale and known limitations for every decision, and authored setup and usage documentation enabling the client organization to operate the system independently.	

Additional Experience

Shift Supervisor Paragon Protection Limited	Jun 2025 — Present Toronto, ON
• Supervise building services operations, coordinating shift staffing and incident documentation alongside continued technical project work.	

PROJECTS

AURA v2 - Retrieval-augmented conversational system for emotional support	
• Engineered a validated 50-70k-turn training corpus, harmonizing four heterogeneous public datasets into a unified JSONL schema with shared parser utilities and a single strategy label taxonomy. • Designed tiered data quality gates with a 300-example manually validated gold set and measured annotation reliability using Cohen’s kappa inter-annotator agreement between two independent LLM labelers.	
Project Redline - Local LLM stress-test and evolutionary benchmark harness	
• Built a three-phase benchmark harness measuring local LLM throughput and hardware saturation on Apple Silicon, instrumenting token-level timing and thermal telemetry alongside EvalPlus code-solving accuracy. • Caught and corrected instrumentation defects including a timer corrupted by reasoning-phase token emission and a silent validation fallback masking a 53x measurement discrepancy.	
Resume Factory - Local-first resume and cover letter automation	
• Building a local-first document automation tool that composes tailored resumes from a structured content store, with provenance constraints on every factual claim and a human review step before output.	

EDUCATION

Post graduate diploma in AI and Data Science, Loyalist College, Toronto, ON	Sep 2023 - Apr 2025
Bachelor of Technology in Computer Science, Rashtriya Raksha University, Gujarat, India	Aug 2018 - Jun 2022

CERTIFICATIONS

Model Context Protocol: Advanced Topics	Anthropic
Introduction to Model Context Protocol	Anthropic
DP-203 - Data Engineer Associate	Microsoft
